DEVELOPMENT OF EXPLORATION PROJECTS IN TANZANIA

SAKARIYA MINES AND MINERALS

INTRODUCTION

Sakariya Group is a multinational business conglomerate with its headquarter located in Ahmedabad, Gujrat. Our operations include greenfield exploration projects in Gold and Graphite, Real estate and Air products.

MINES & MINERALS

Tanzania

Exploration - 28 PLs

534 Sq. KMs

Graphite - 7 PLs

74 Sq. KMs

Gold - 21 PLs

460 Sq. KMs

- Graphite prospecting areas are located in Mozambique Mobile Belt
- Gold Prospecting area are located in Lake Victoria Goldfield region which hosts many world class deposits

REAL ESTATE

Ahmedabad, India

Developed

14 M Sq. Ft

Under Development

9 M Sq. Ft

#Residential: 13000+

#Commercial: 2000+

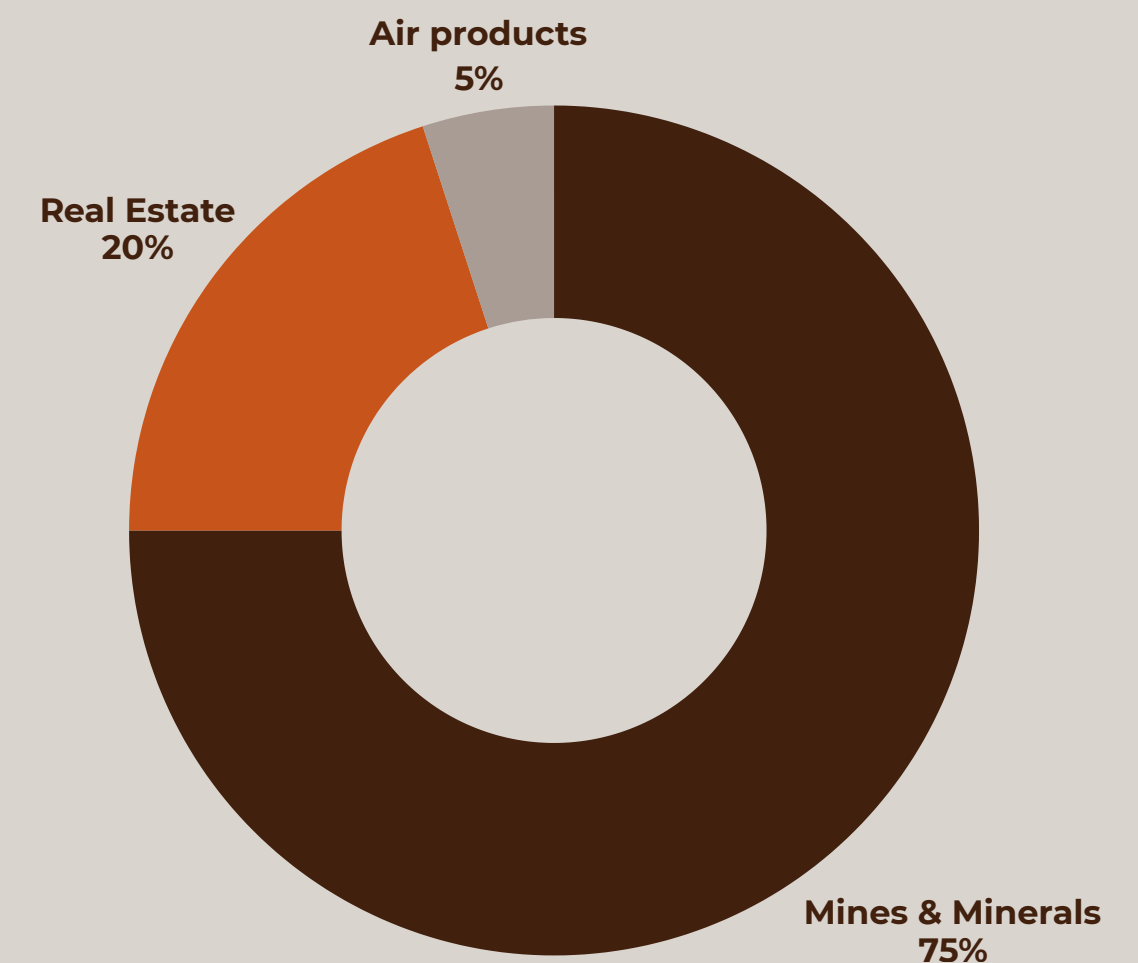

AIR PRODUCTS

Ahmedabad, India

Argon, Oxygen, Carbon dioxide, Hydrogen and Nitrogen

36,000 CUM

**Sakariya Group
Portfolio Share**

OUR LEADERSHIP TEAM

Diversified expertise across business, technology and mining that combines financial strength with operational execution

KALPESH PATEL
Chairman and MD

ANSH PATEL
Director

JASON GU
EVP – Corporate Development

SHALIN SHAH
Advisor- Corporate
Strategy & Finance

VISHAD PATEL
Director – Investor Relations

SUPRIYA DAS
Technical Director

- Diverse experience: Geology, Mining business development, Company operations.
- Successfully led grassroots and comprehensive gold and graphite exploration projects in Africa and Asia.
- Involved in resource estimation and reporting according to JORC and NI 43-101

TEAM STRENGTH

156 years

Cumulative experience in
Mineral Exploration

**100+ Research
Publication**

We have 7 PhDs in our Team

Software Proficiency

ArcGIS, QGIS, Erdas Imagine, Global Mapper,
AutoCAD, Leapfrog, Datamine, SURPAC, MX
Deposit, Vulcan, Surfer, Geosoft Oasis Montaj,
RES 2D/3D INV, Java, Python, SQL, LLM, Spark,
SES, Multiple other Geological and Geochemical
softwares

Multiple Commodities

Base Metals (Ni, Cu, Zn, Pb), Gold,
Graphite, PGE, Chromite, Iron and
Manganese, Bauxite, Diamond,
Uranium, Thorium, Limestone,
Dolomite, Coal, REE and Heavy
Minerals

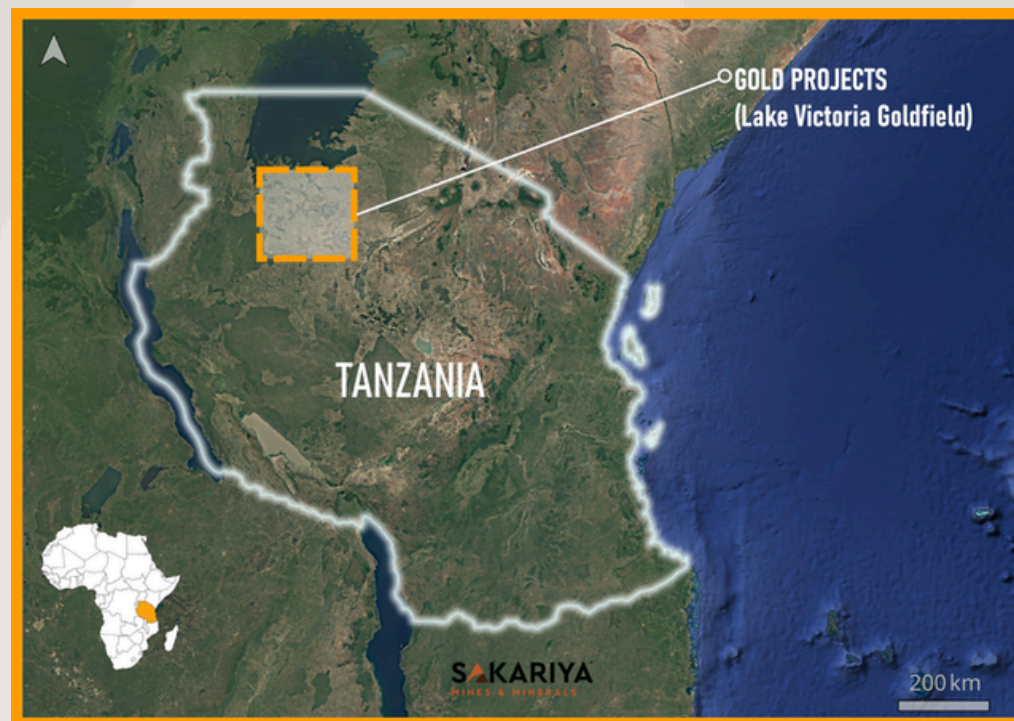

30+ Indian Geoscientists

**20+ Geologists from
Tanzania**

OUR EXPLORATION PROJECTS

To date, our efforts have been entirely self-funded. We would love to have partners join our journey

Kahama Cluster

- 21 prospecting licenses
- Cumulative area 460 sq Km
- Strategically located near major mines

Nzega Cluster

- 15000+ Soil Samples, 400+ Pits done with Geological Mapping and field activities

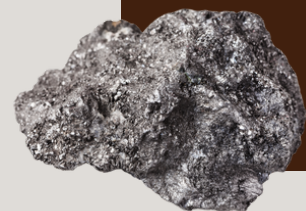

Geita Cluster

- 4500+ LKM Magnetic Survey, 110+ LKM IPR Surveys done
- 20+ Mineralized Targets identified
- 2200+ Meters Diamond Drilling completed

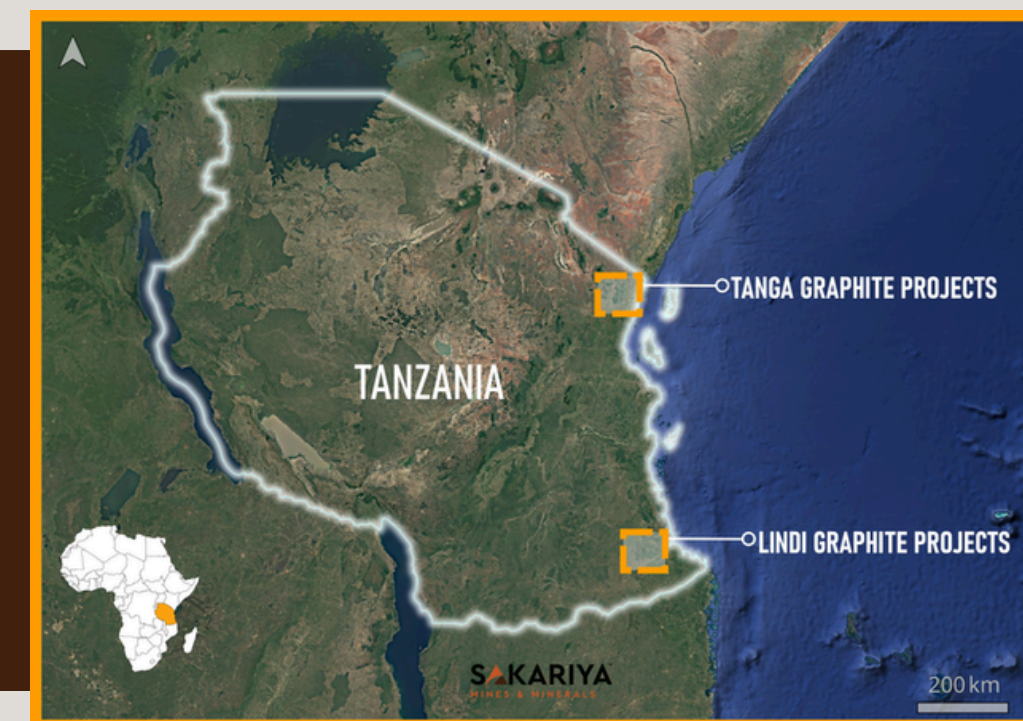

Lindi Cluster

- 2 prospecting licenses
- Cumulative area 45.7 sq km
- 7302 m RAB drilling completed

Tanga Cluster

- 5 prospecting licenses
- Cumulative area 28.4 sq km
- 9635 m diamond drilling completed
- Mineral Resource Estimation done
- Pre-Feasibility Studies in progress

GRAPHITE EXPLORATION UPDATE

TANGA GRAPHITE PROJECT

A Unique Combination of Scale, Quality and Value

WORLD-CLASS SCALE

183 Mt
Total Mineral
Resource
@ 4.86% TGC

* One of the largest undeveloped JORC-compliant flake graphite deposits globally

PREMIUM PRODUCT CONFIRMED

>97% TC Purity
achieved via
standard flotation

*Exceeds specifications for high-value markets, including battery anodes

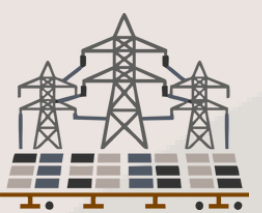

EXCEPTIONAL FLAKE VALUE

>60% Large &
Jumbo Flake
distribution in most
ore types

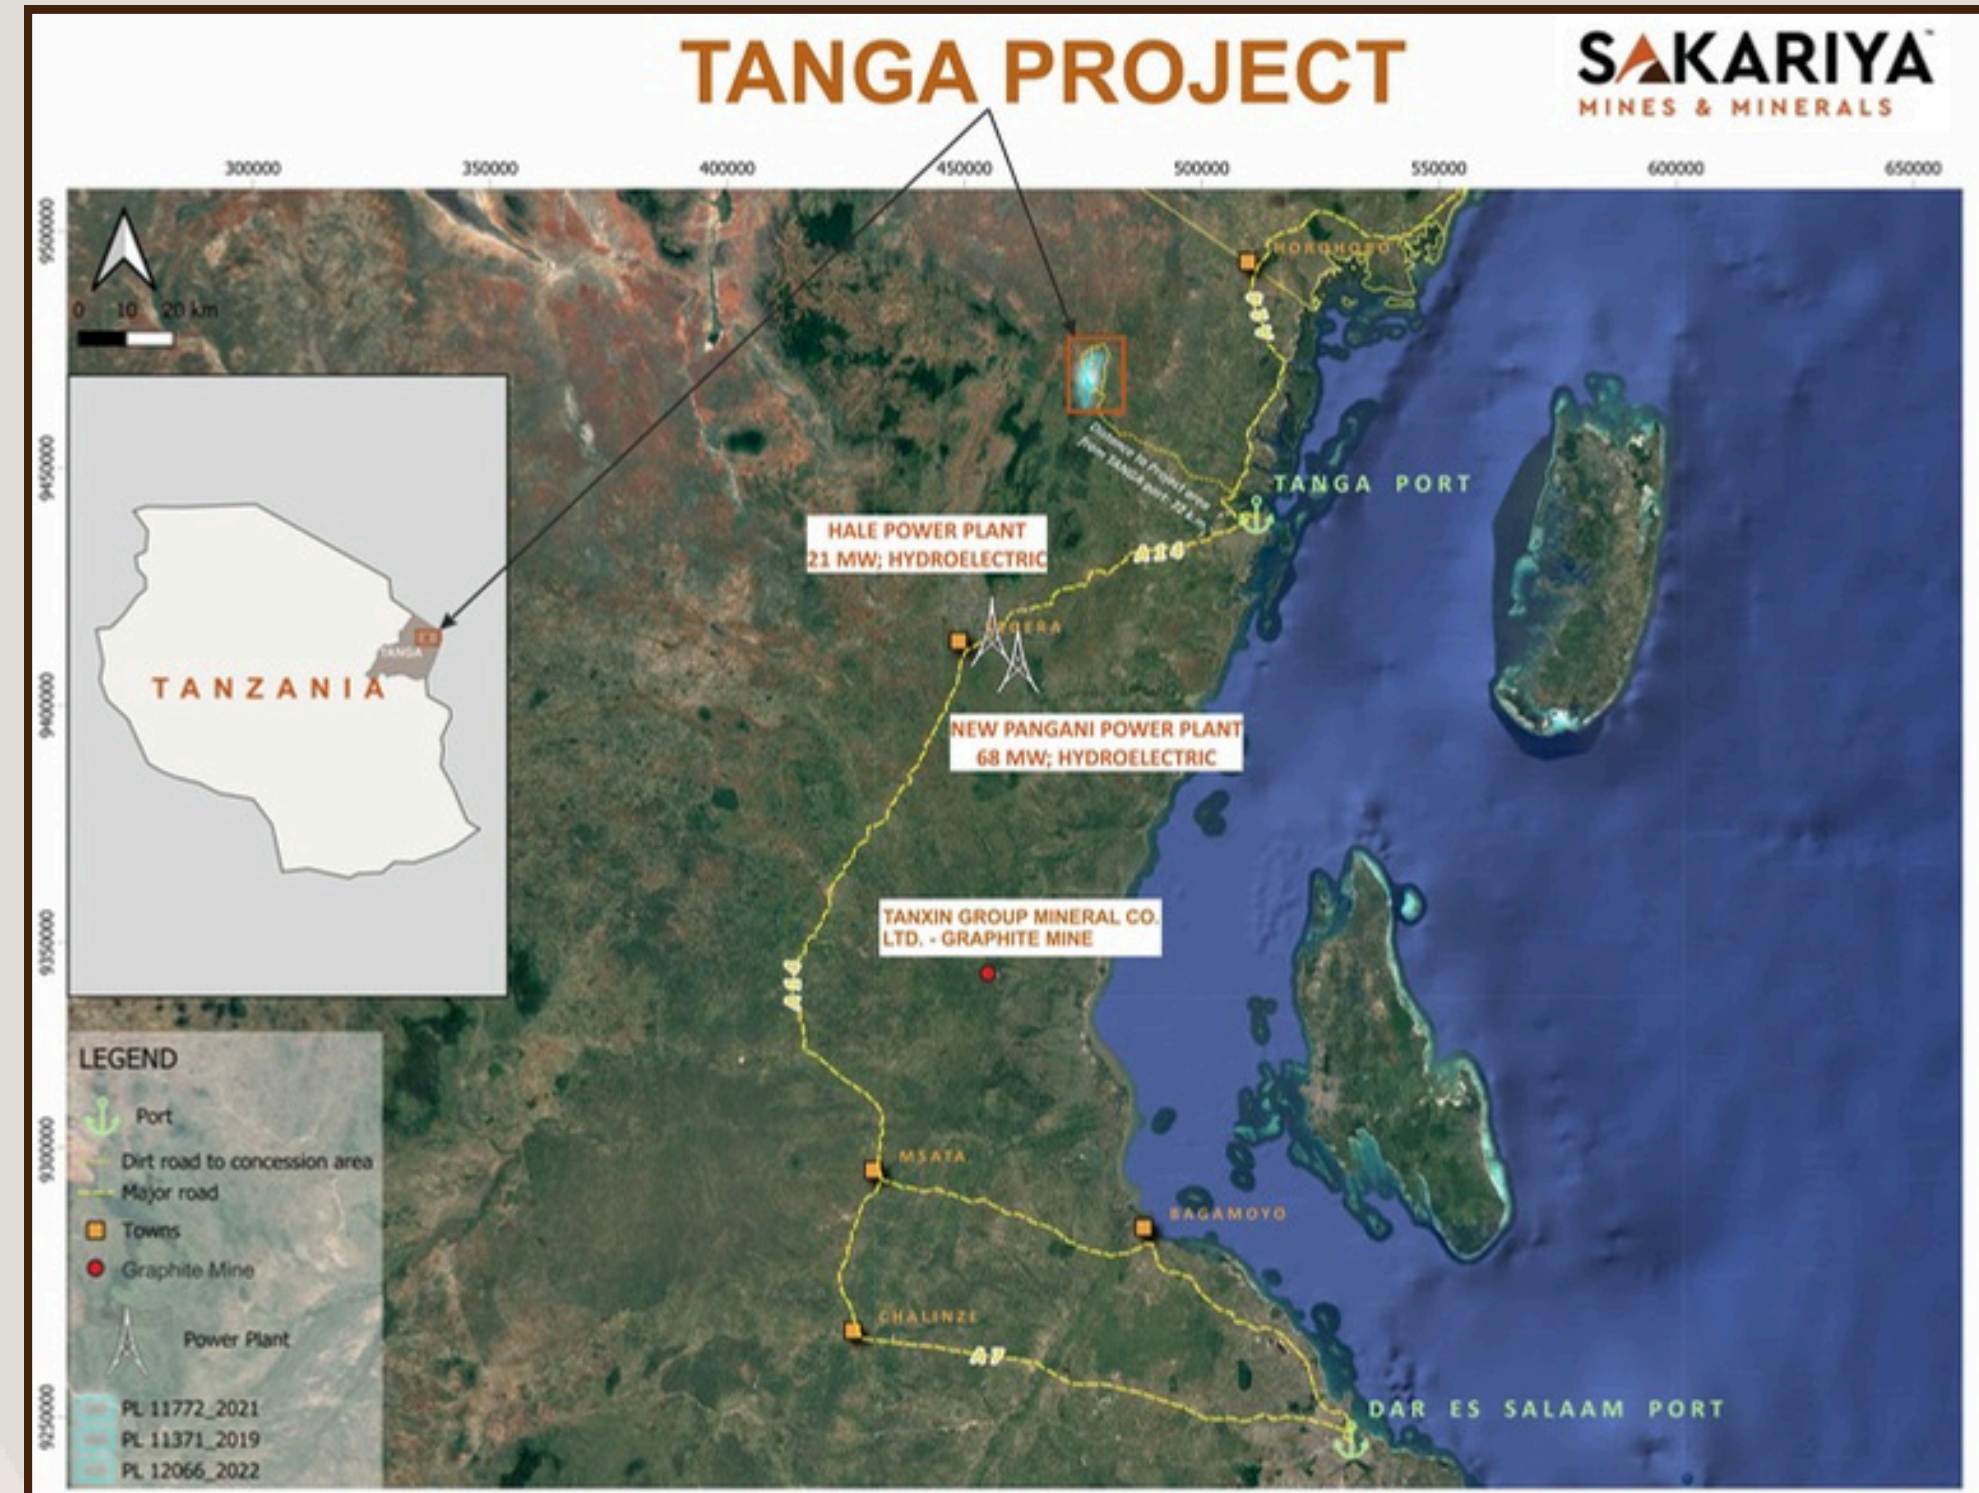

*Maximizes product value and ensures diverse market access

Infrastructure in Place

Existing Infrastructure

- **Plugged into a national heavy-haul corridor:** Direct access to the paved Tanga–Horohoro (T13/A14) trunk road for efficient movement of equipment and concentrates to the coast.
- **Closest major port advantage:** Only ~70–80 km to the modernized Port of Tanga—far shorter than inland routes to Dar es Salaam—cutting haulage cost, time, and congestion risk.
- **Export redundancy built in:** Optional use of Dar es Salaam Port (~349 km) as a secondary, high-capacity gateway with frequent sailings and broad market connectivity.
- **Industrial-grade infrastructure tailwinds:** Located in a region upgraded by the ~\$10B East African Crude Oil Pipeline (EACOP) corridor, bringing better roads, telecoms, and service hubs that reduce execution risk.
- **Grid-backed power availability:** Supported by TANESCO's expanding grid, including a proposed 132 kV line from Majani Mapana, with nearby reliable generation (Hale 21 MW; Pangani Falls Hydro 68 MW).
- **Low-cost, low-carbon energy edge:** Access to the 2,115 MW Julius Nyerere Hydropower Station enables greener, cheaper midstream processing—estimated shaping costs around US\$419/t—while lowering the project's scope-three footprint.
- **Smarter processing layout:** Plans for a lowland processing plant (e.g., Mwele or Bwiti/Magati) to tap dependable power and water, plus a high-angle conveyor to move ore efficiently from the elevated mine site

Tanga Project is like a factory beside a highway, near dependable power, and minutes from a port - while competing projects spend days and extra cost just getting to export.

Defined by Comprehensive and Methodical Exploration

Extensive Exploration and Drilling Campaign

100

Diamond Drillholes
Completed

9,634

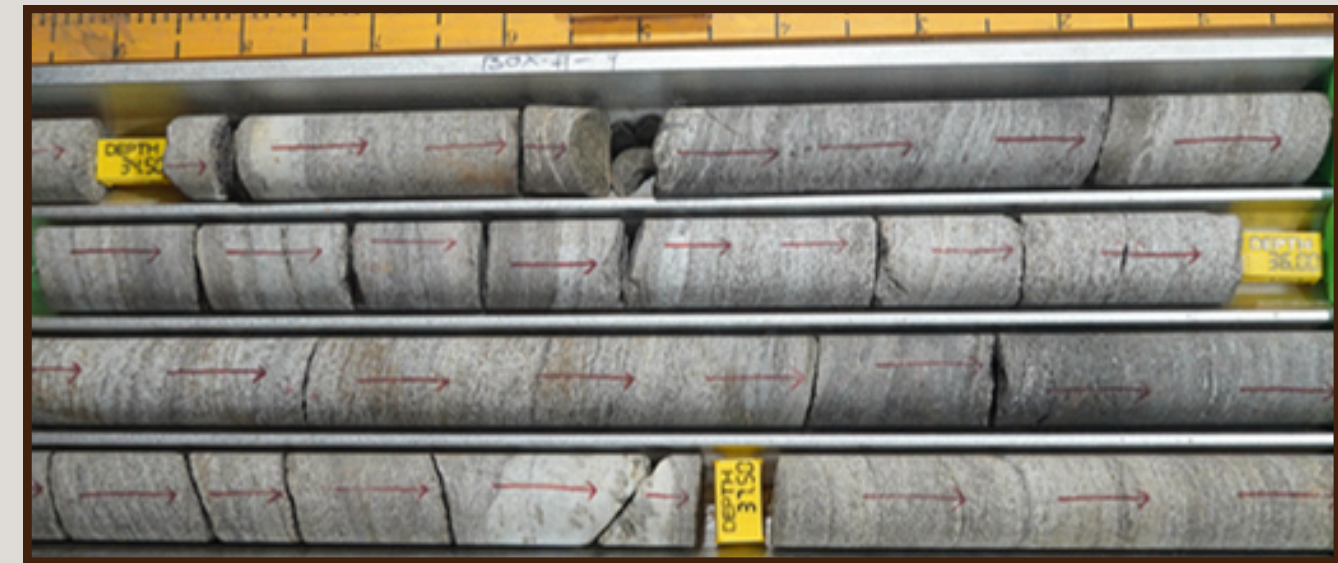

Total Metres
Drilled

3,355

Assay Records
Used in MRE

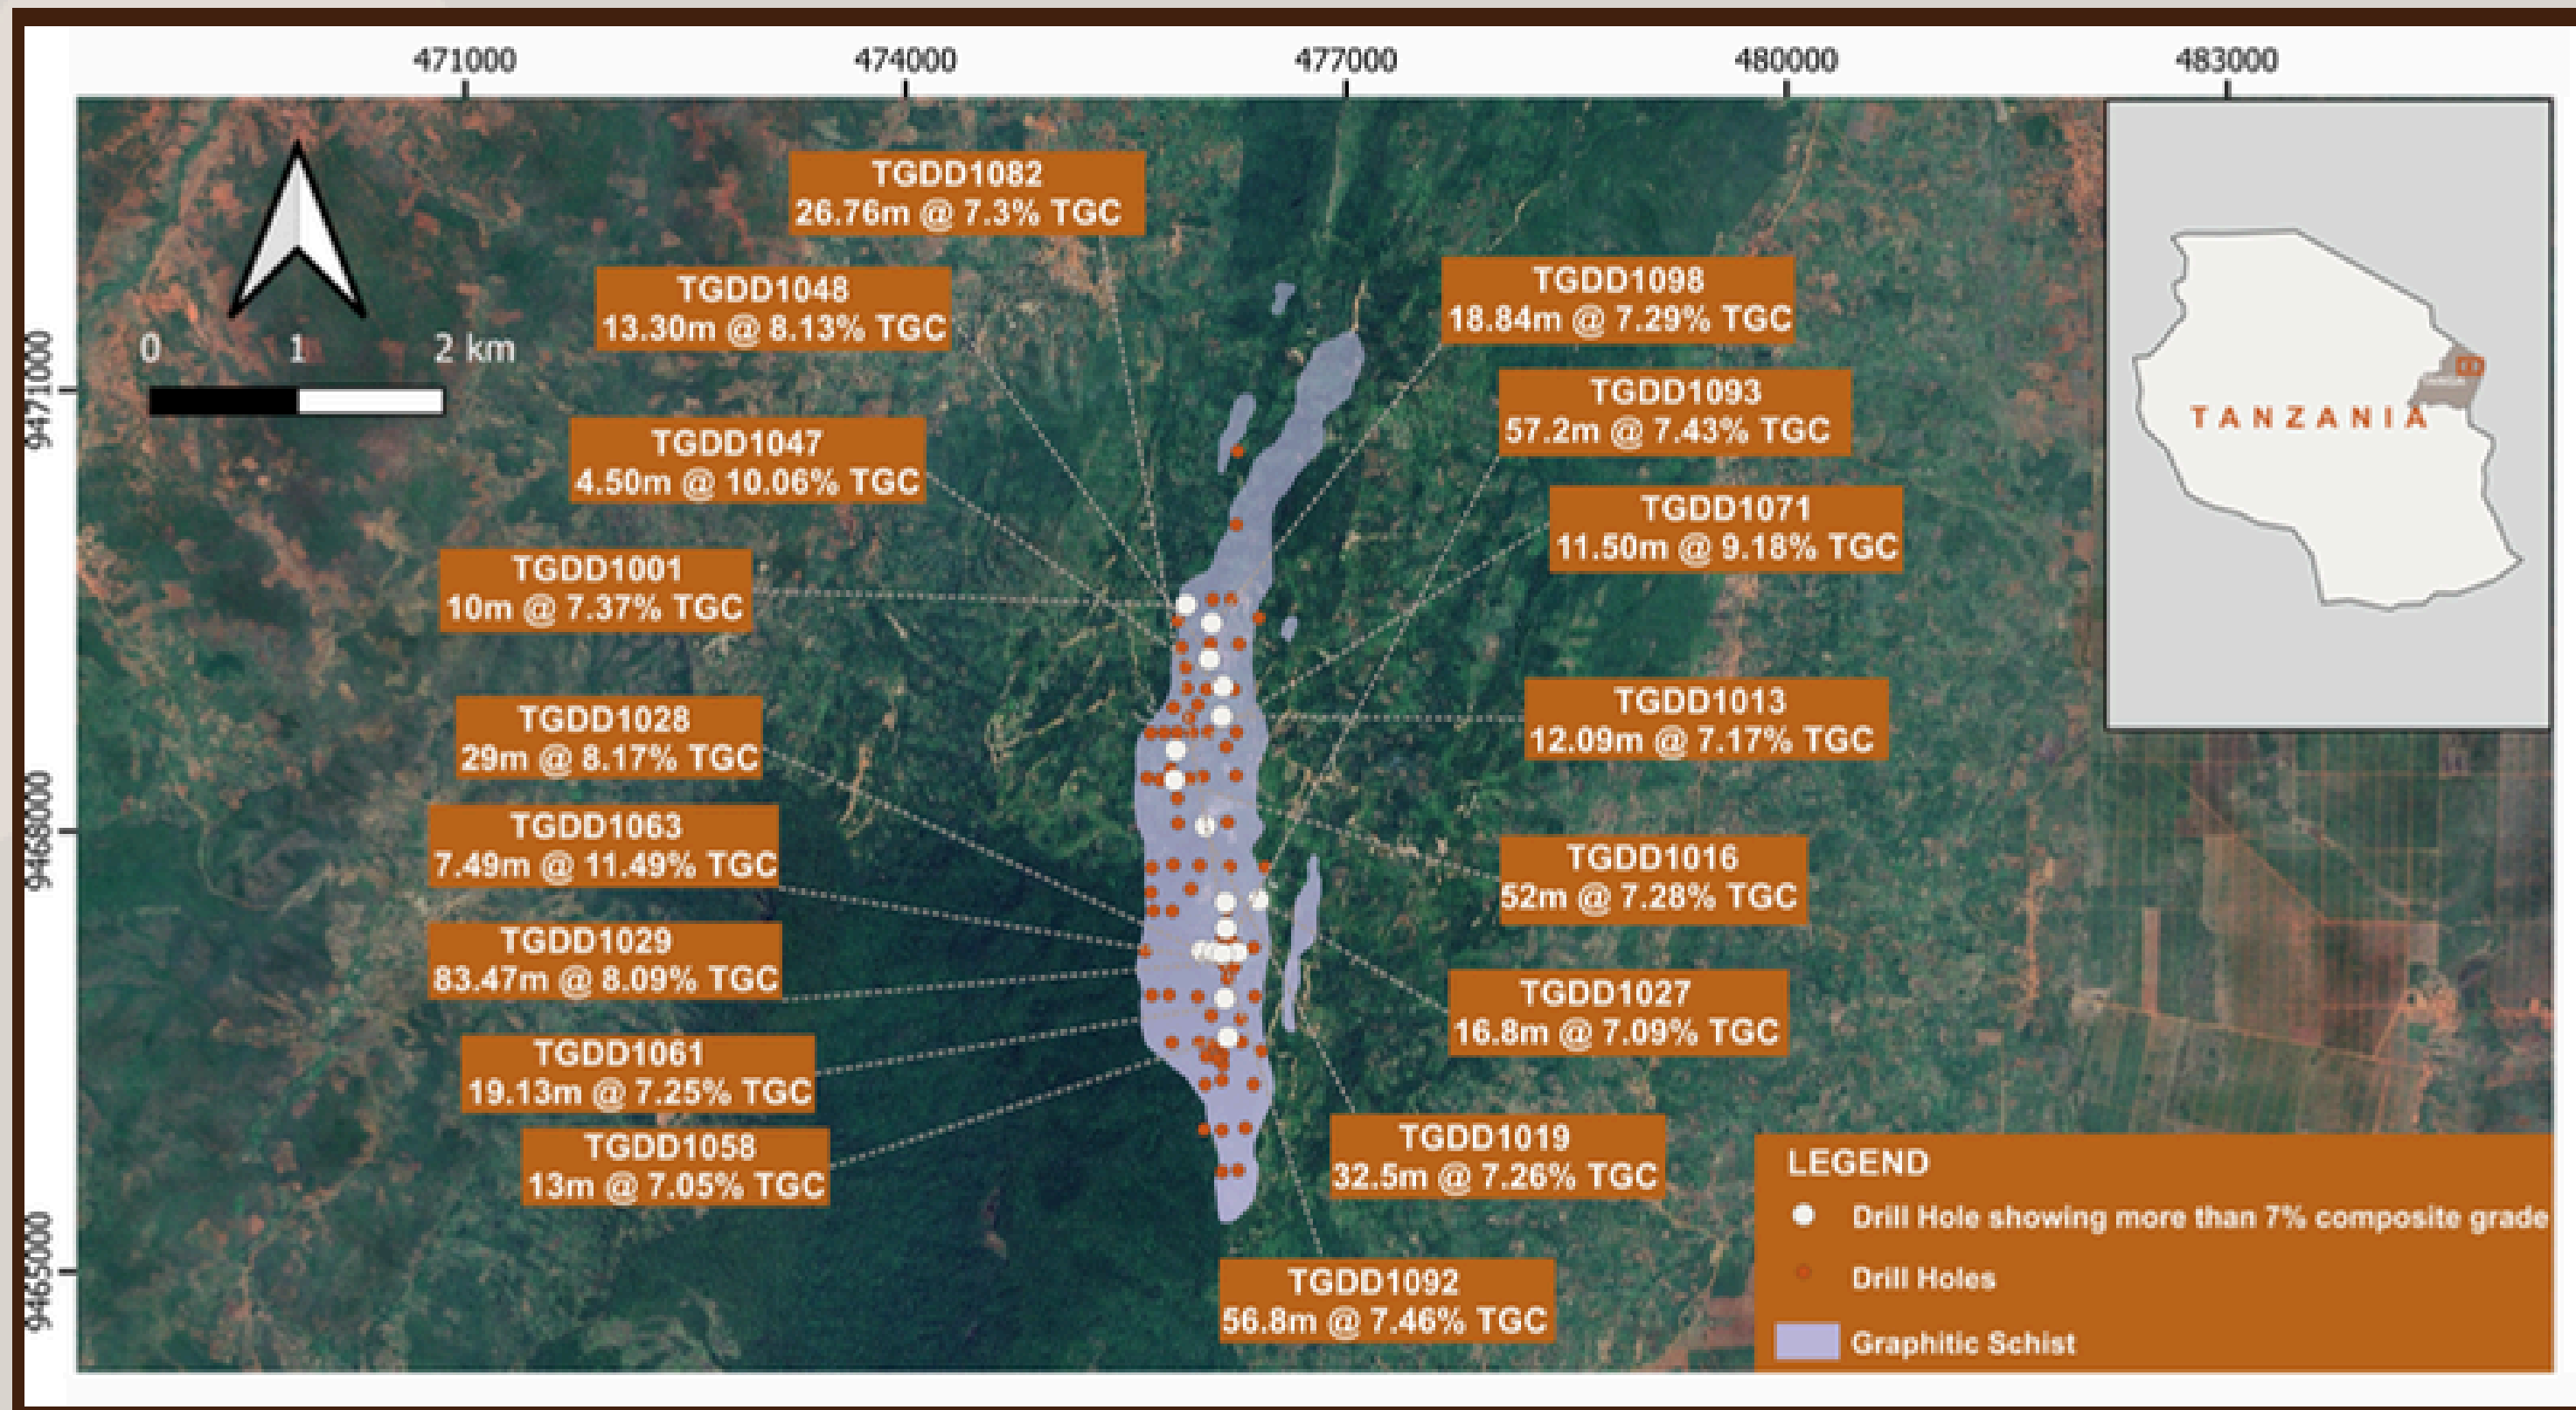

- **Drill Spacing:** Grid density reduced from 400m x 300m down to 50m x 50m in key areas, confirming continuity required for Indicated Resource classification.
- **Data Integrity:** Rigorous QAQC protocols implemented, including insertion of blanks, CRMs, and duplicates at a 1-in-10 frequency. AMC Consultants review found the dataset acceptable for resource estimation with minimal risk.
- A systematic exploration program (2022-2025) has confirmed laterally continuous, consistently mineralized graphitic schist units across the project.

Visual Evidence of Mineralization & Geology

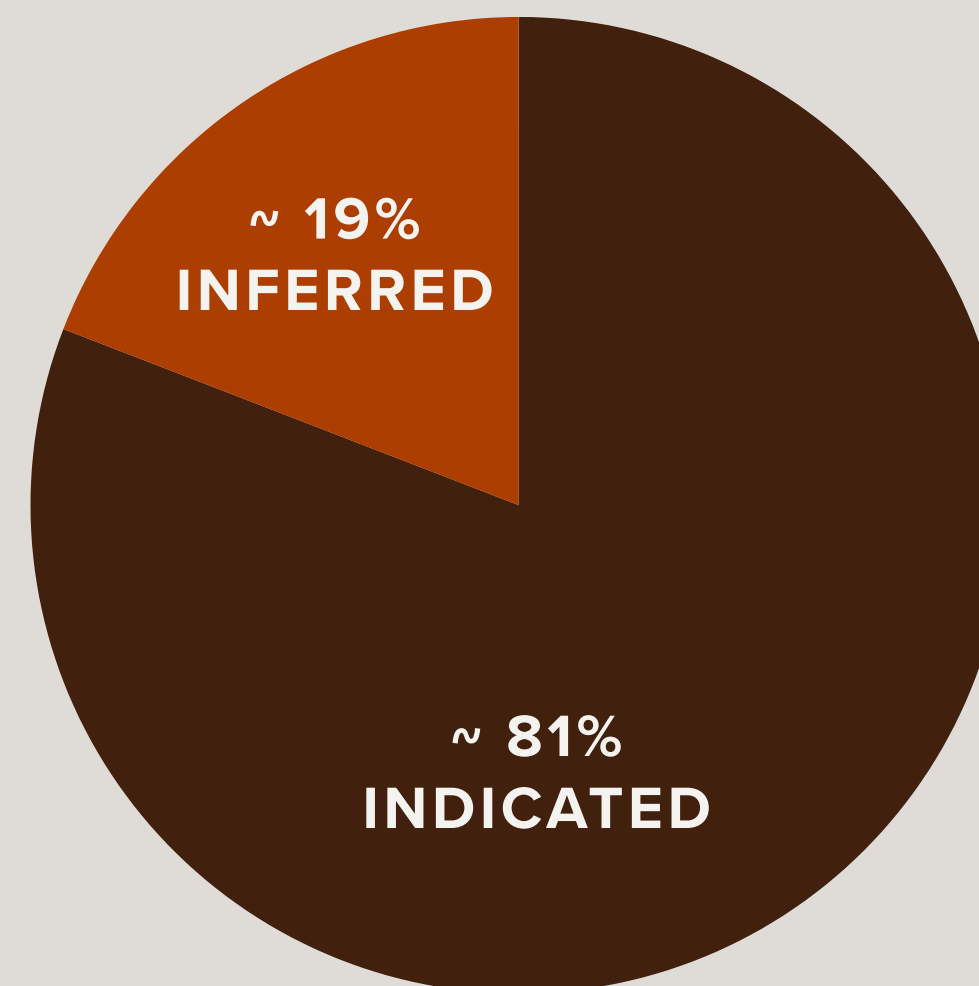

Mineralization is hosted within graphitic schists and is visually distinct. The geological model is well-supported by high-quality core and robust logging data.

Mineral Resource Area with drilling to date

A Tier-1 Foundation JORC Mineral Resource

183 Mt
Total Mineral Resource
@4.86%TGC

Indicated
148 Mt @4.94% TGC

Inferred
35 Mt @ 4.52% TGC

Geological Context

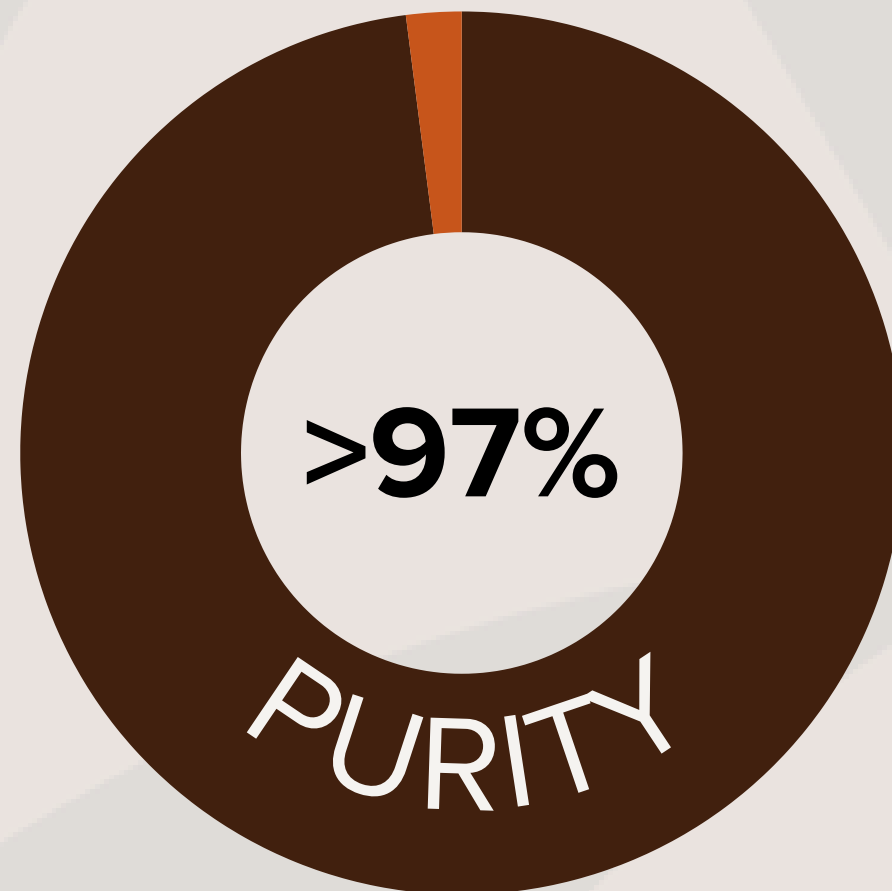

Hosted in the prolific Mozambique Belt, known for high-grade, large-flake graphite deposits.
Tanga Project (183 Mt)

- Source: Mineral Resource Estimate by AMC Consultants, Nov 2025.
- Reported at a 3% TGC cut-off. JORC (2012) Compliant.*

Product Quality Dashboard

Simple Processing Delivers High-Purity, High-Value Concentrate

ULTRA-HIGH PURITY

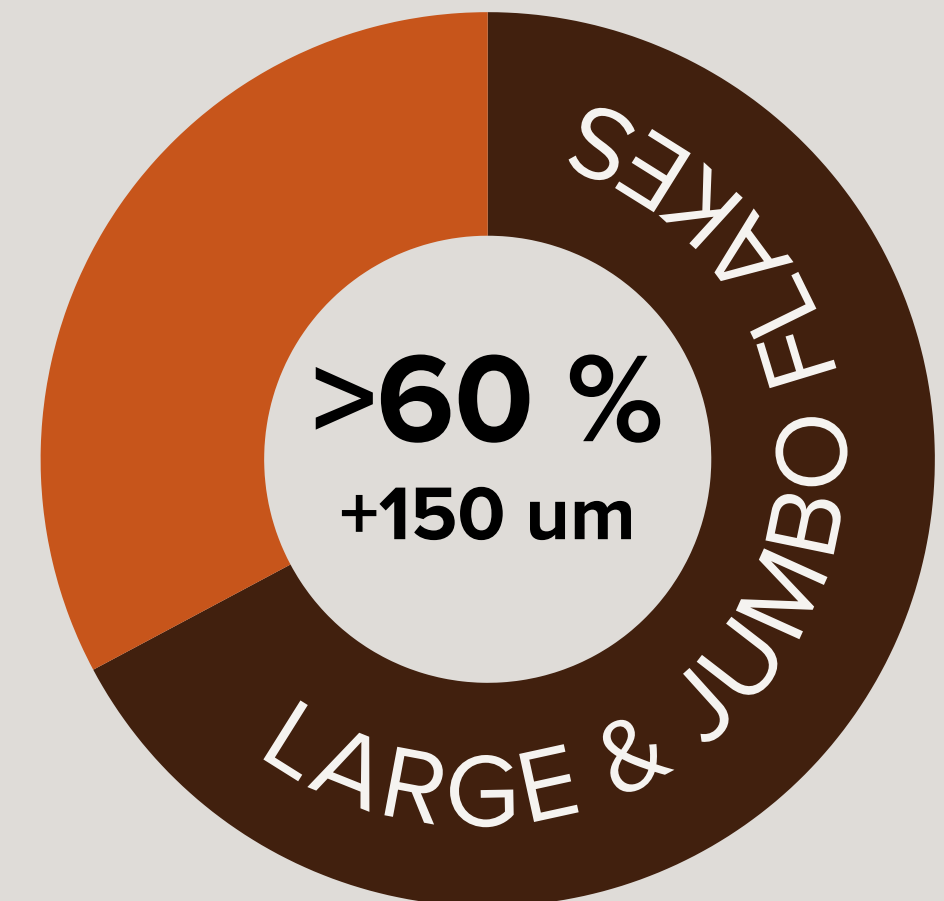

Consistently achieved Final Concentrate Total Carbon(TC) grades across all ore types (Oxide, Fresh and Kaolinised). IMO considers >97% TCa "premium product exceeding typical saleable grades of >94% TC.

HIGH RECOVERY

Recovery achieved in 7 of 8 composites using a standard flotation flowsheet, demonstrating efficient processing

DOMINANT LARGE FLAKE

A majority of concentrate mass is in the premium priced Large and Jumbo flake categories, driving superior economics. Oxide composites also delivered high coarse flake content of > 57% (+150 µm).

Source: Metallurgical Test work by Independent Metallurgical Operations (IMO), Dec 2025.

Consistent, High-Quality Results across all Ore Types

	Oxide Composites (TDM006, TDM007)	Fresh Composites (5 Samples)	Kaolin Composite (Standout) (TDM008)
Purity (TC)	97.6% – 98.4%	97.2% – 98.6%	97.4%
Recovery (TC)	93.0% – 94.9%	89.1% – 95.2% (in 4 of 5)	89.1%
Coarse Flake (+150µm)	57.1% – 67.2%	34.8% – 65.2%	72.7%

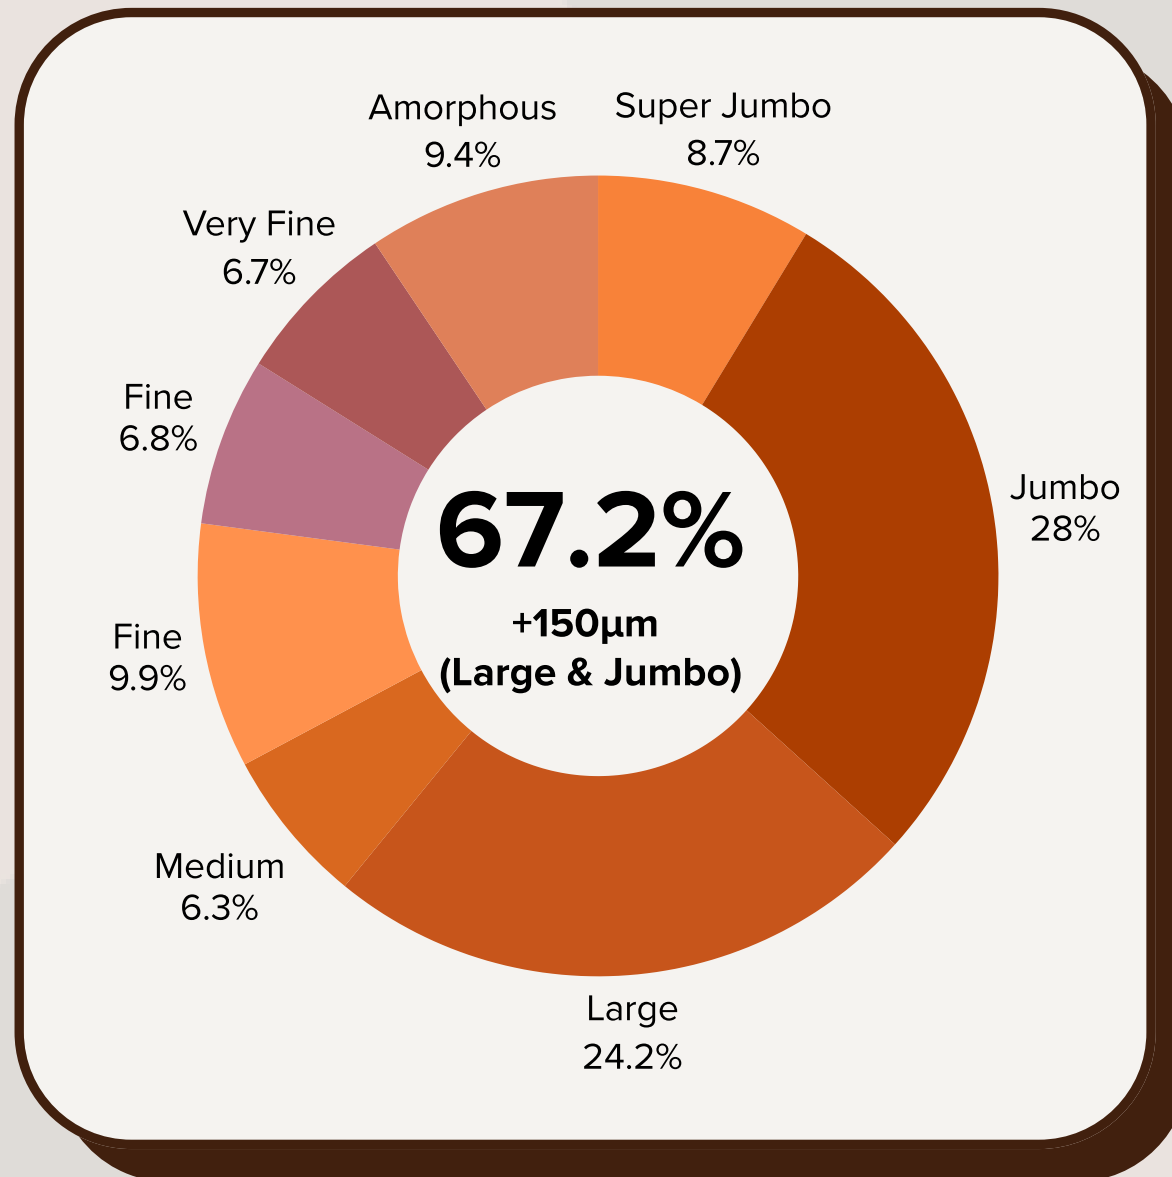

Key Takeaway

The Tanga deposit demonstrates remarkable metallurgical consistency. Premium concentrate specifications are achieved from simple flotation across the entire spectrum of weathered and fresh ore types.

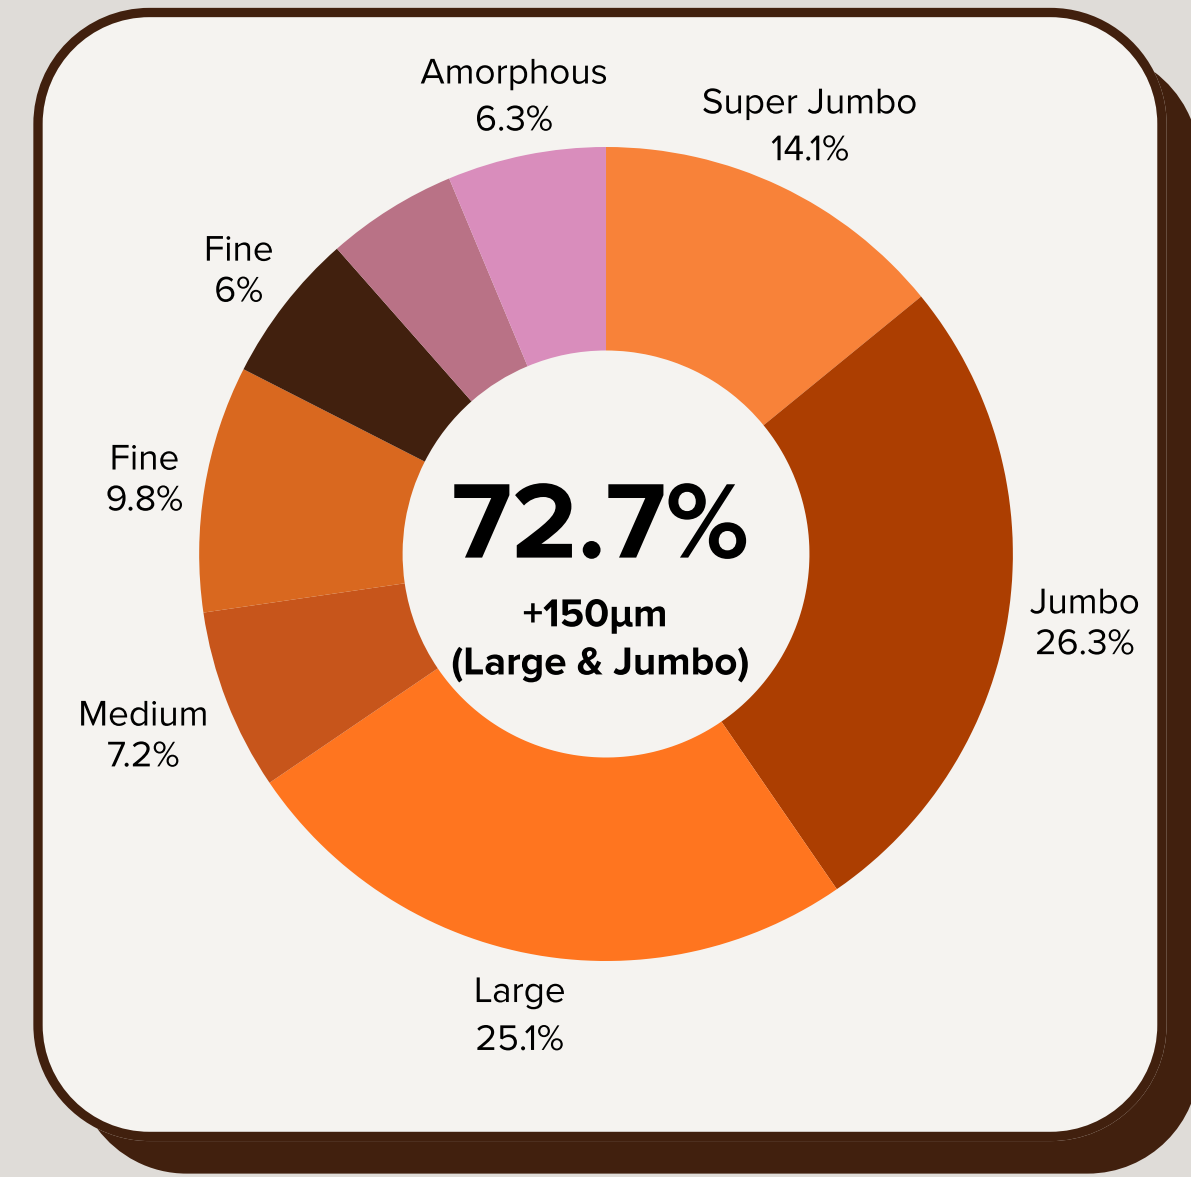

Superior Flake Size Distribution

Underpins Premium Value

Oxide Composite (TDM006)

Kaolin Composite (TDM008)

*Standout Performer

Key Takeaway

The Tanga deposit consistently produces a coarse flake concentrate highly sought after by premium markets, with exceptional distributions observed in the significant Kaolinized zone, enhancing the project's overall value proposition.

A De-Risked Foundation for a Future Graphite Leader

TANGA GRAPHITE PROJECT

World-Class Resource Defined

Scale confirmed for a long-life operation with high geological confidence (81% Indicated)

Premium Product Proven

Quality and value demonstrated by expert metallurgy, achieving >97% purity with standard processing

Process Path Unlocked

Simple flotation delivers high recovery and a valuable coarse flake concentrate across all ore types

Key Takeaway

The Tanga Project is poised to become a critical, large-scale, and responsible source of high-purity graphite for the global energy transition.

Next Steps

Q1 2026

- Infill drilling to upgrade Inferred resources.
- Commence PES study (Scoping) at the same time.

Q2 2026

- Commence Pre-Feasibility Studies (PFS)

Q3 2026

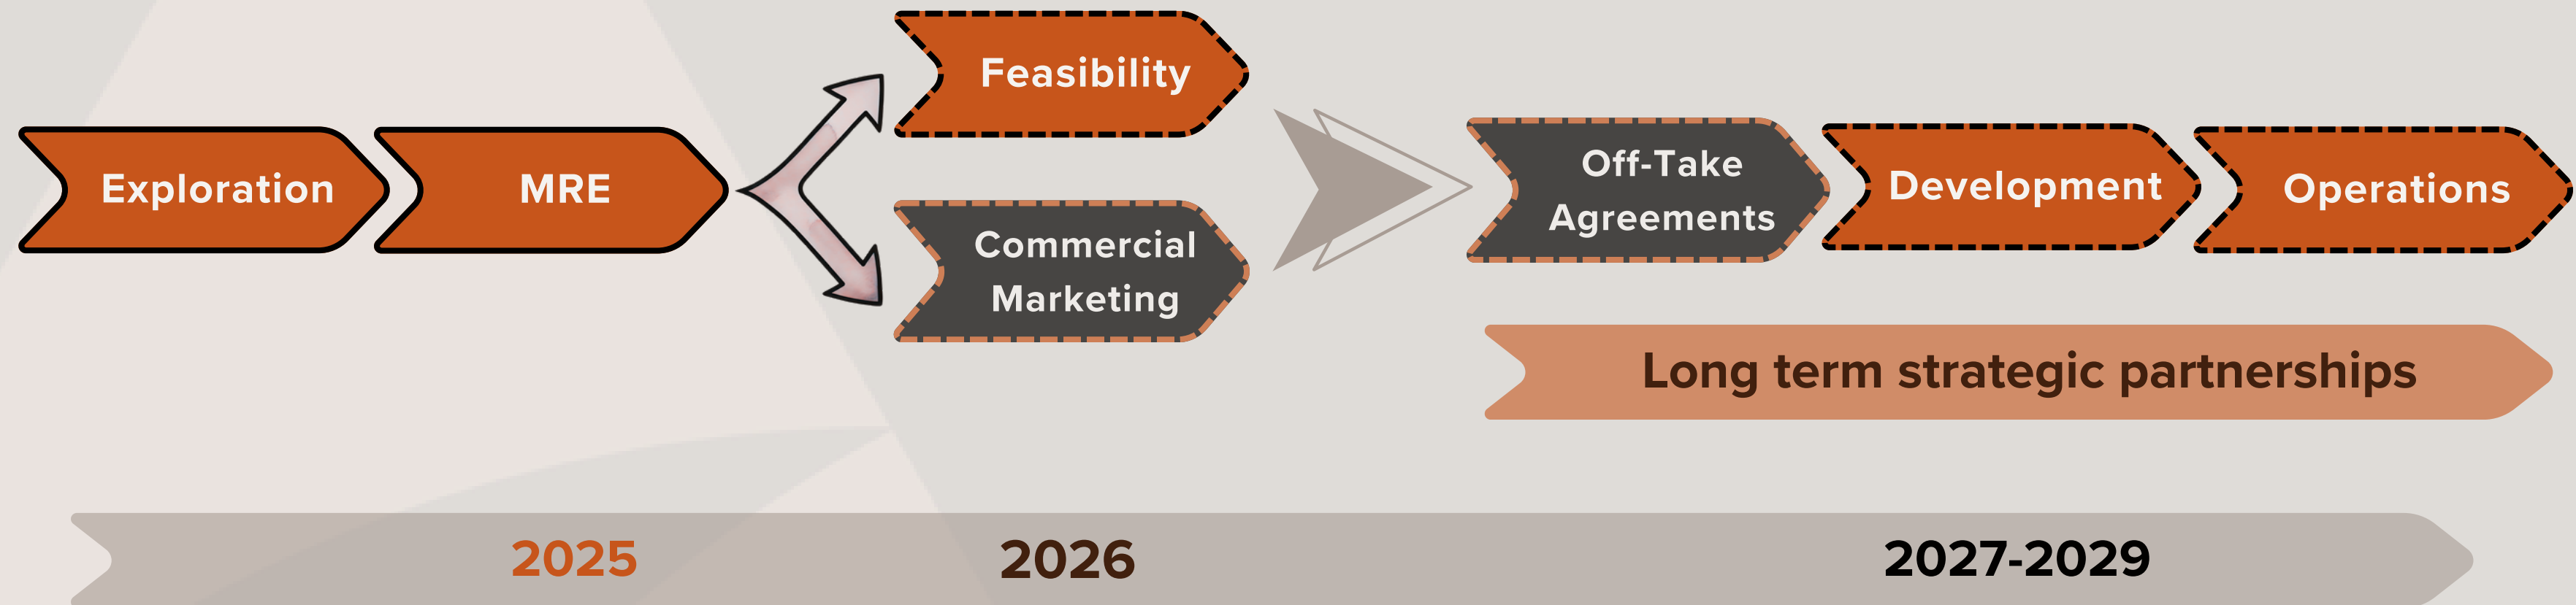

- Bulk sampling for downstream customer qualification

Ongoing

- Engage with strategic partners and off-takers

Tanga's Post-Exploration Plans

Graphite, unlike most commodity minerals, requires significant marketing efforts

With 183 MT of resource at 4.86% TGC
Tanga is poised to be a premier
graphite investment opportunity

Geological Map of Jomu Gold Project

SIGA HILL AND ISONDA GOLD PROJECTS

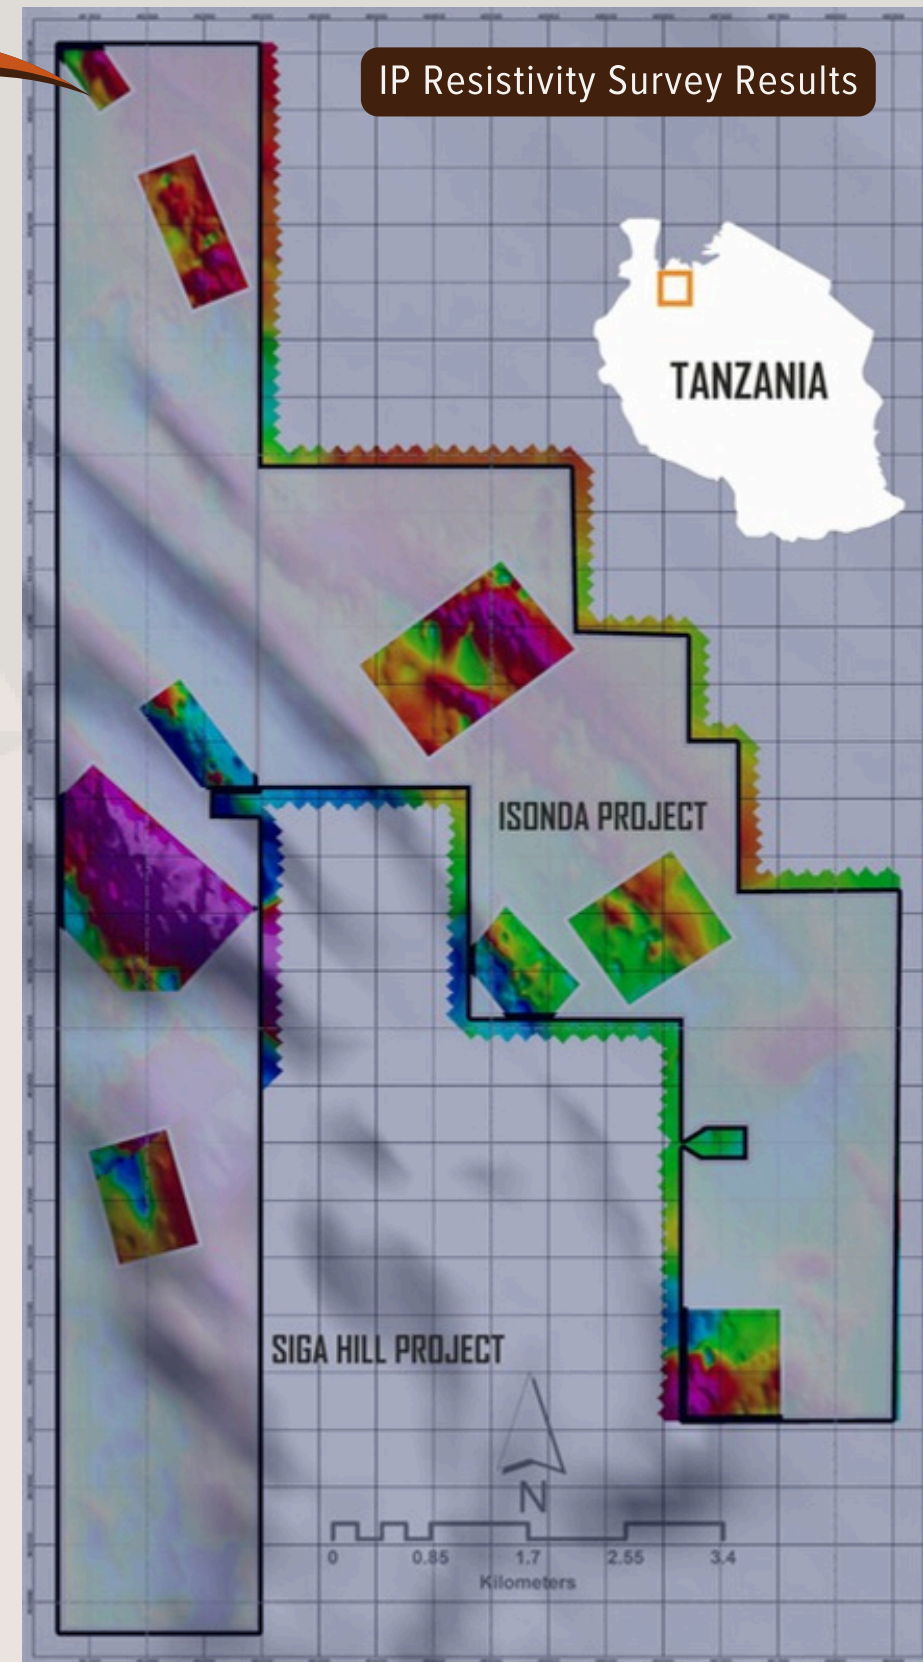

Key Highlights

- Significant intersection in trenches at Siga Hill project include **2m @5.38 g/t Au** and **2m @1.06 g/t Au**
- The targets are promising in terms of length, width and anticipated average grade. The **tentative strike length of all the identified targets is 9 km**
- The targets were identified after systematic geological, geochemical and geophysical investigations carried out both by **our in-house team** and **external experts** from around the world.

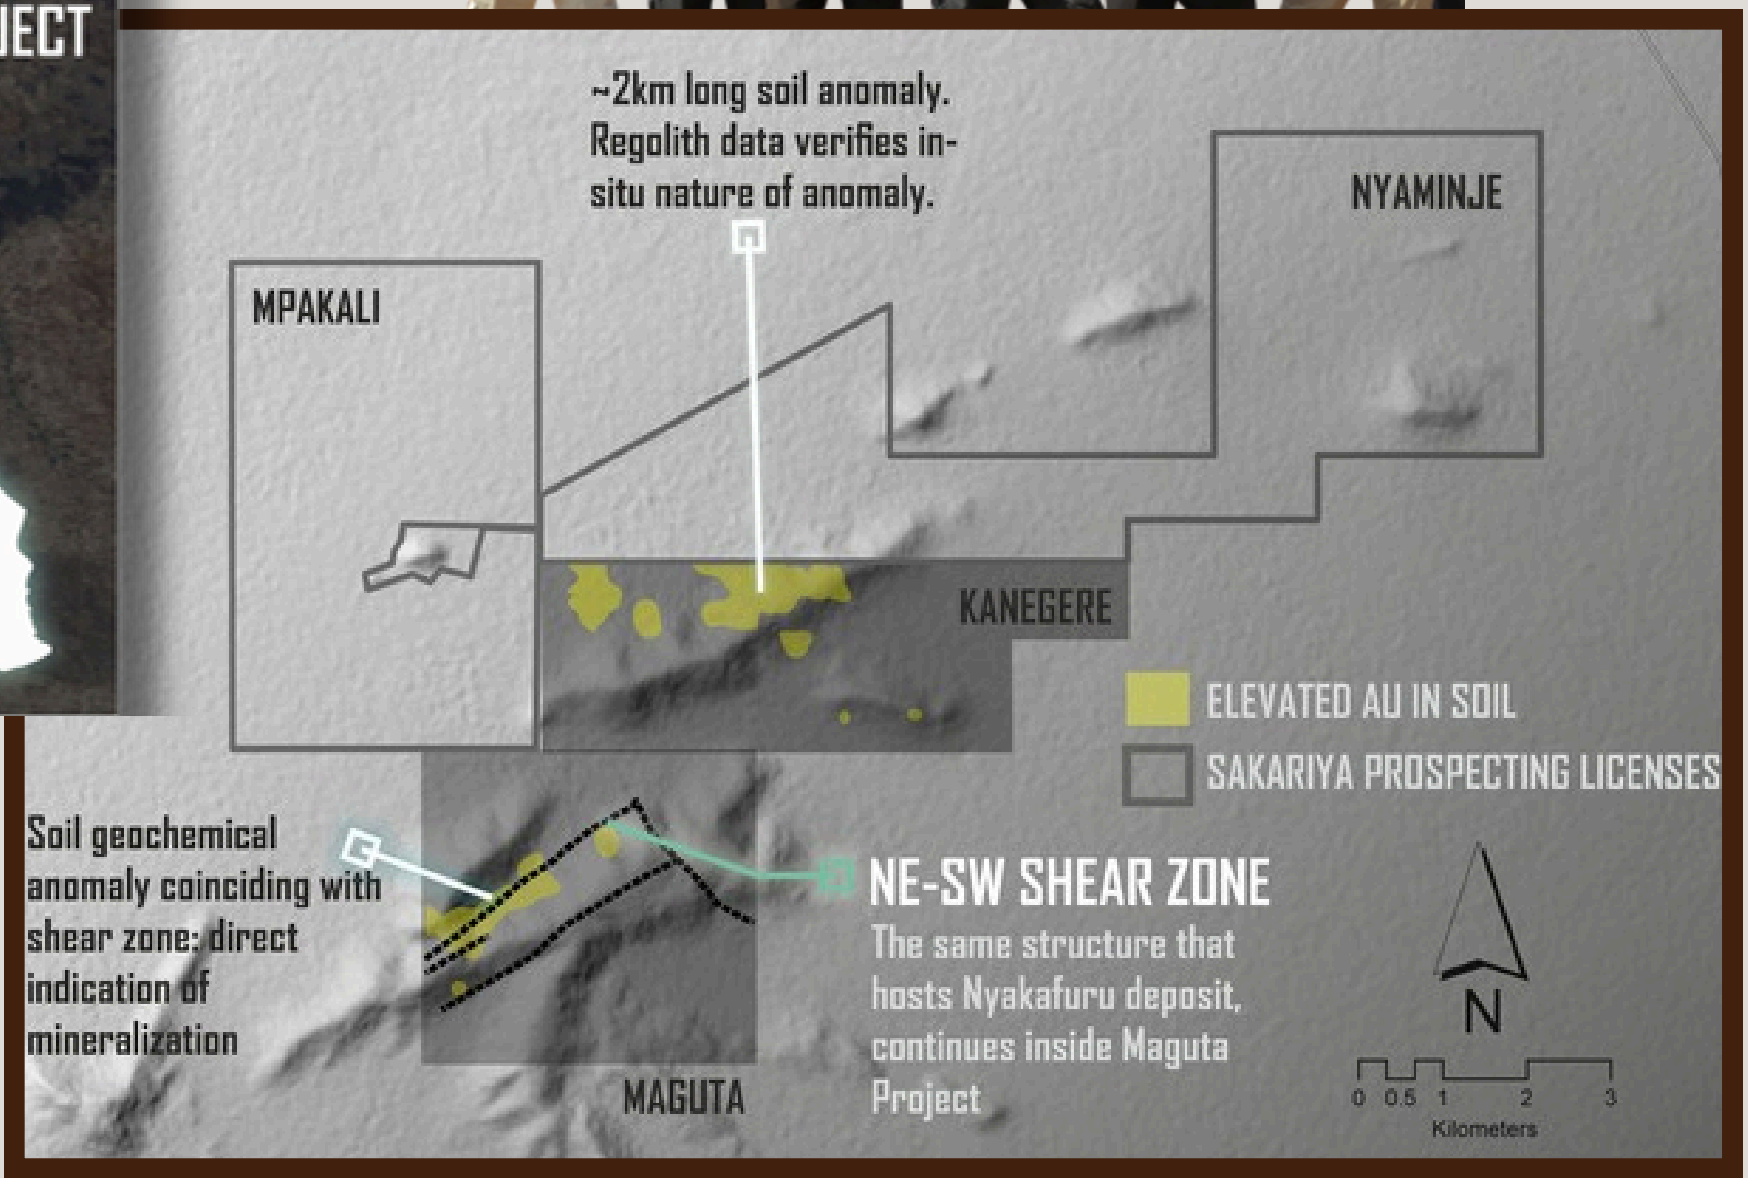

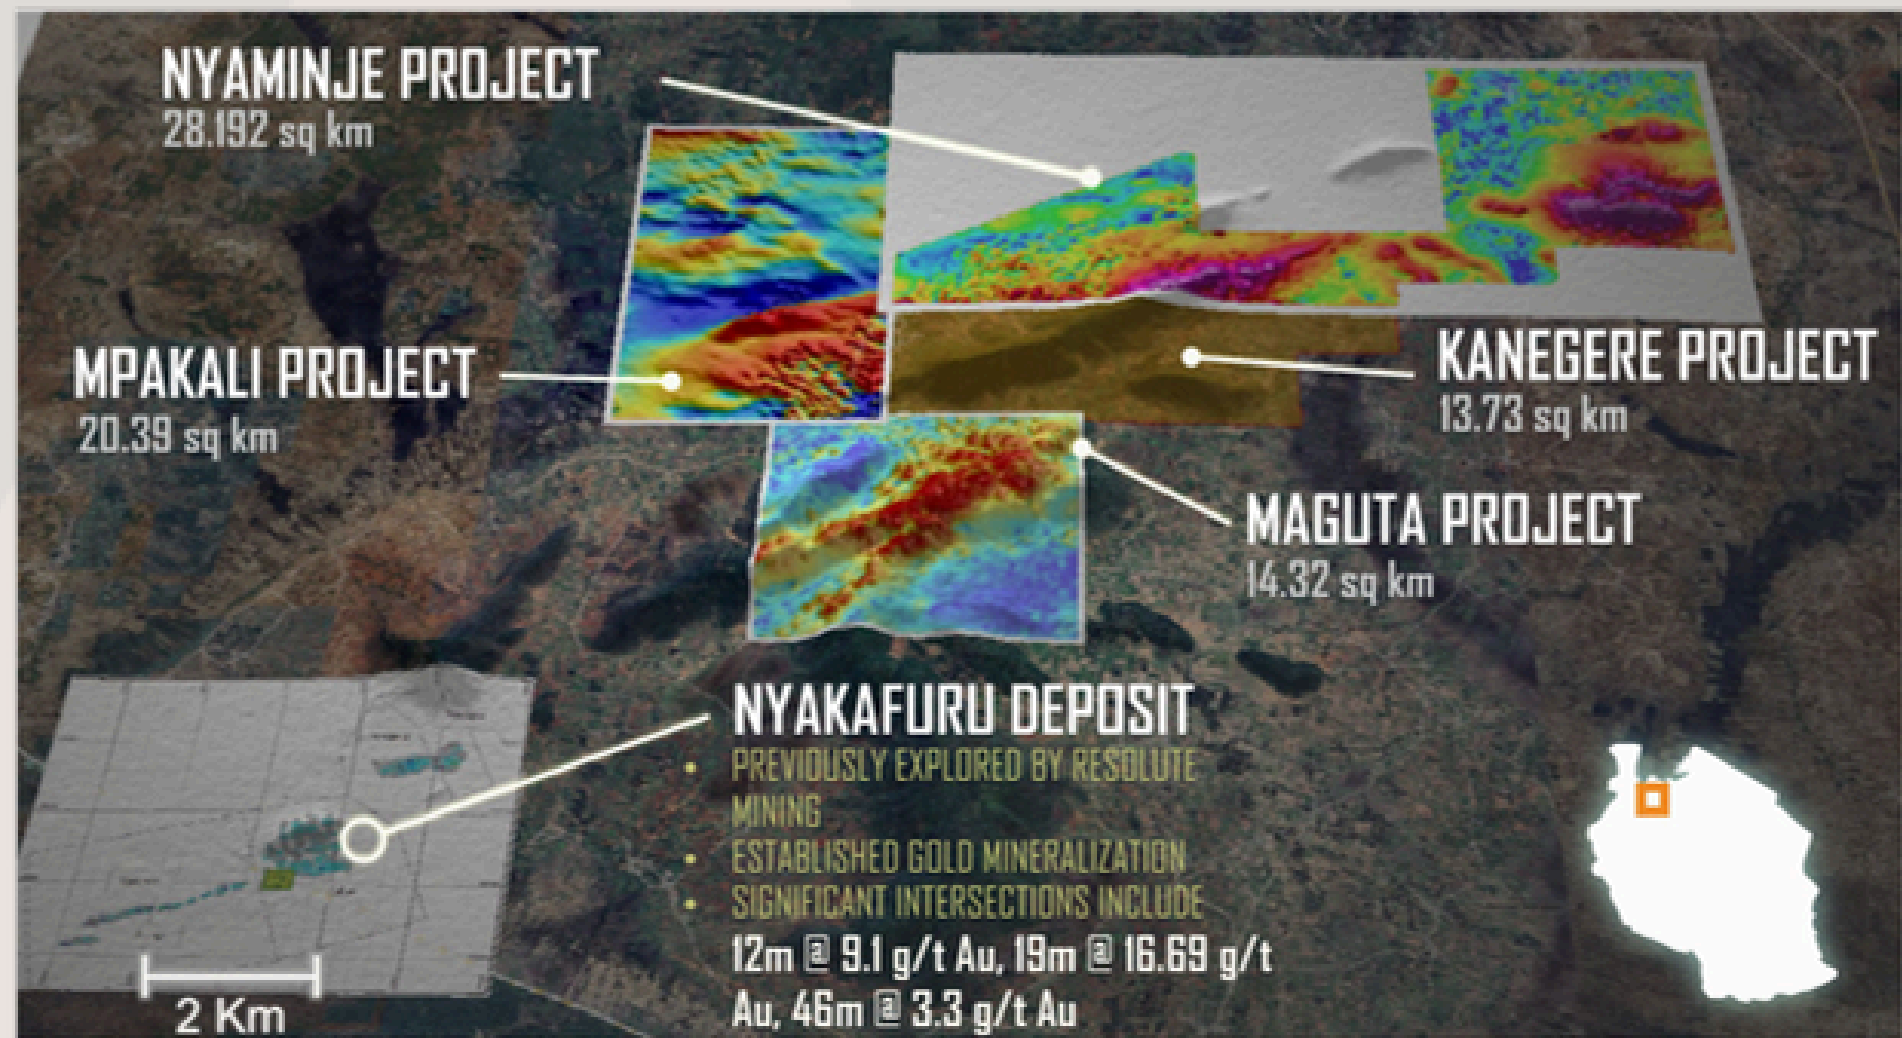

3D view of IPR surveyed results for one block

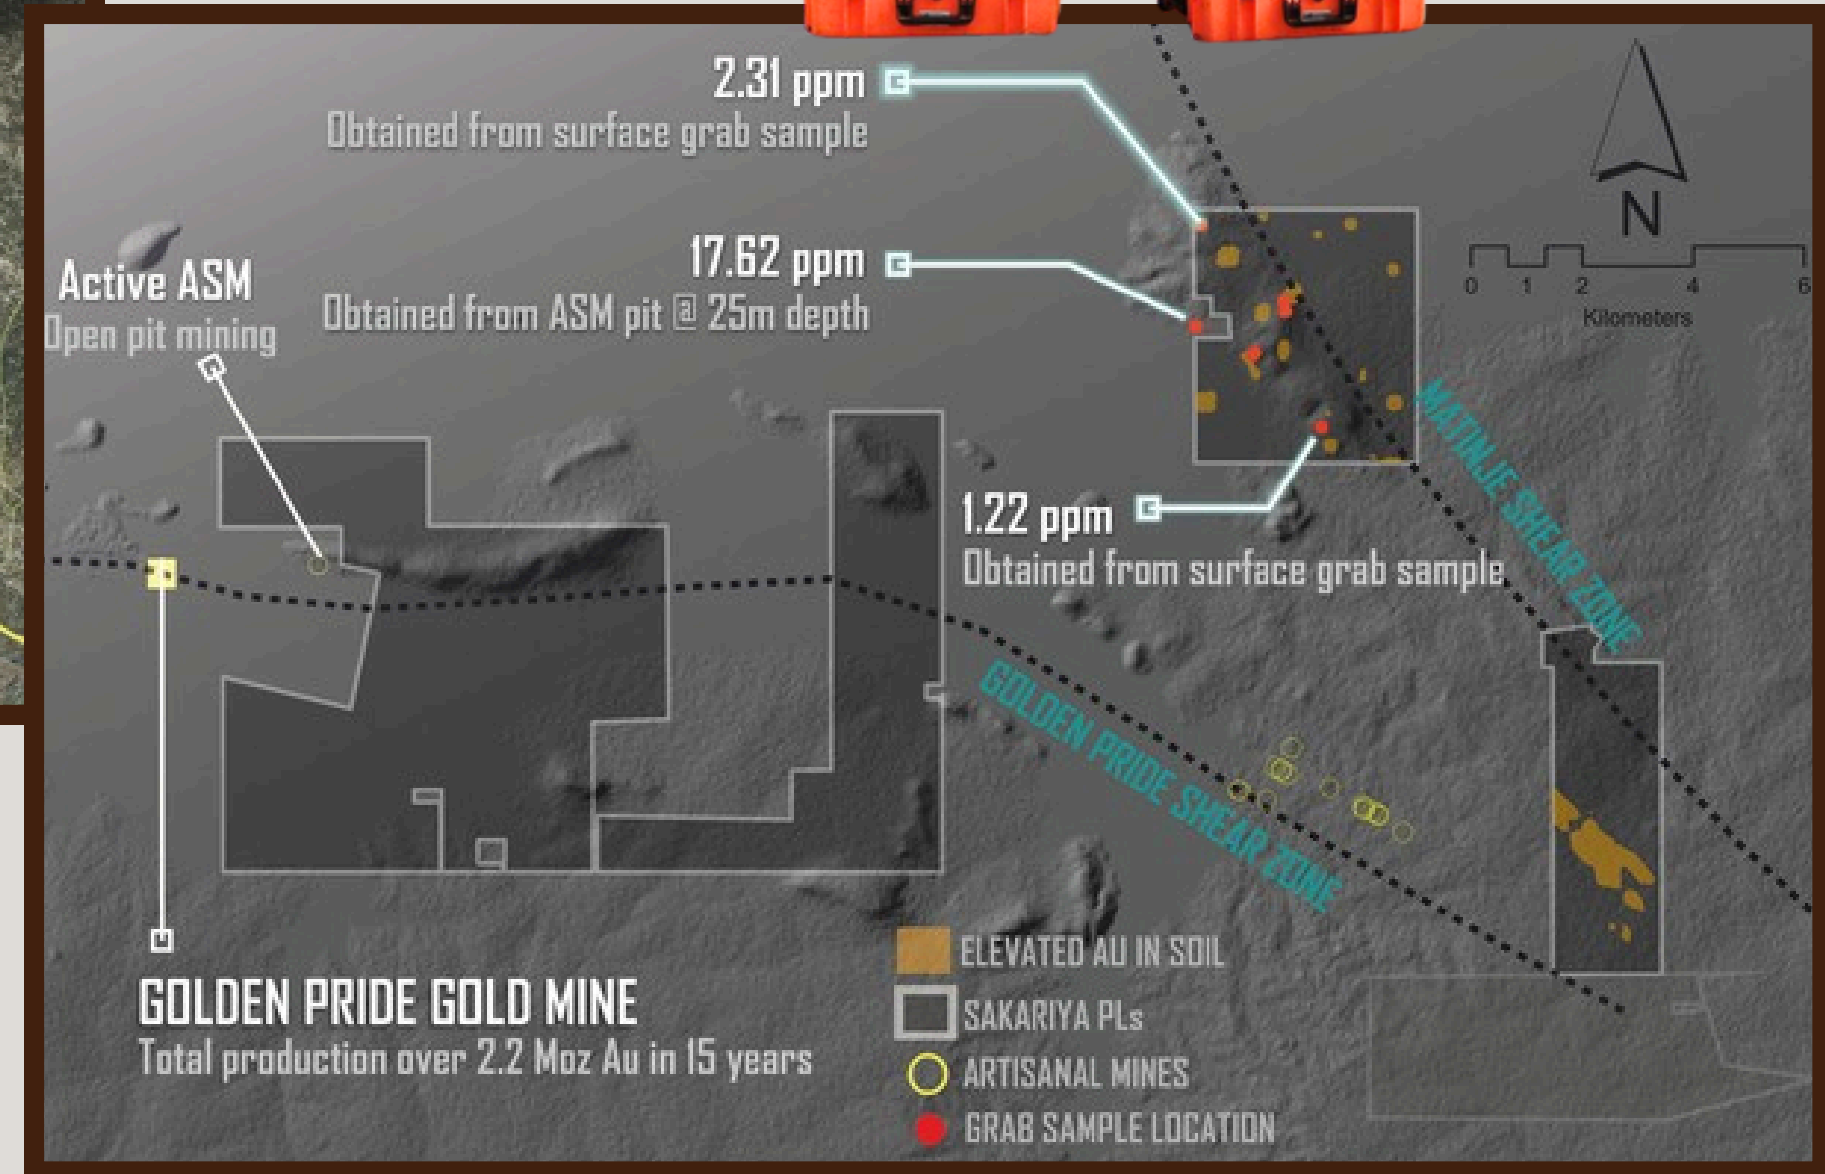

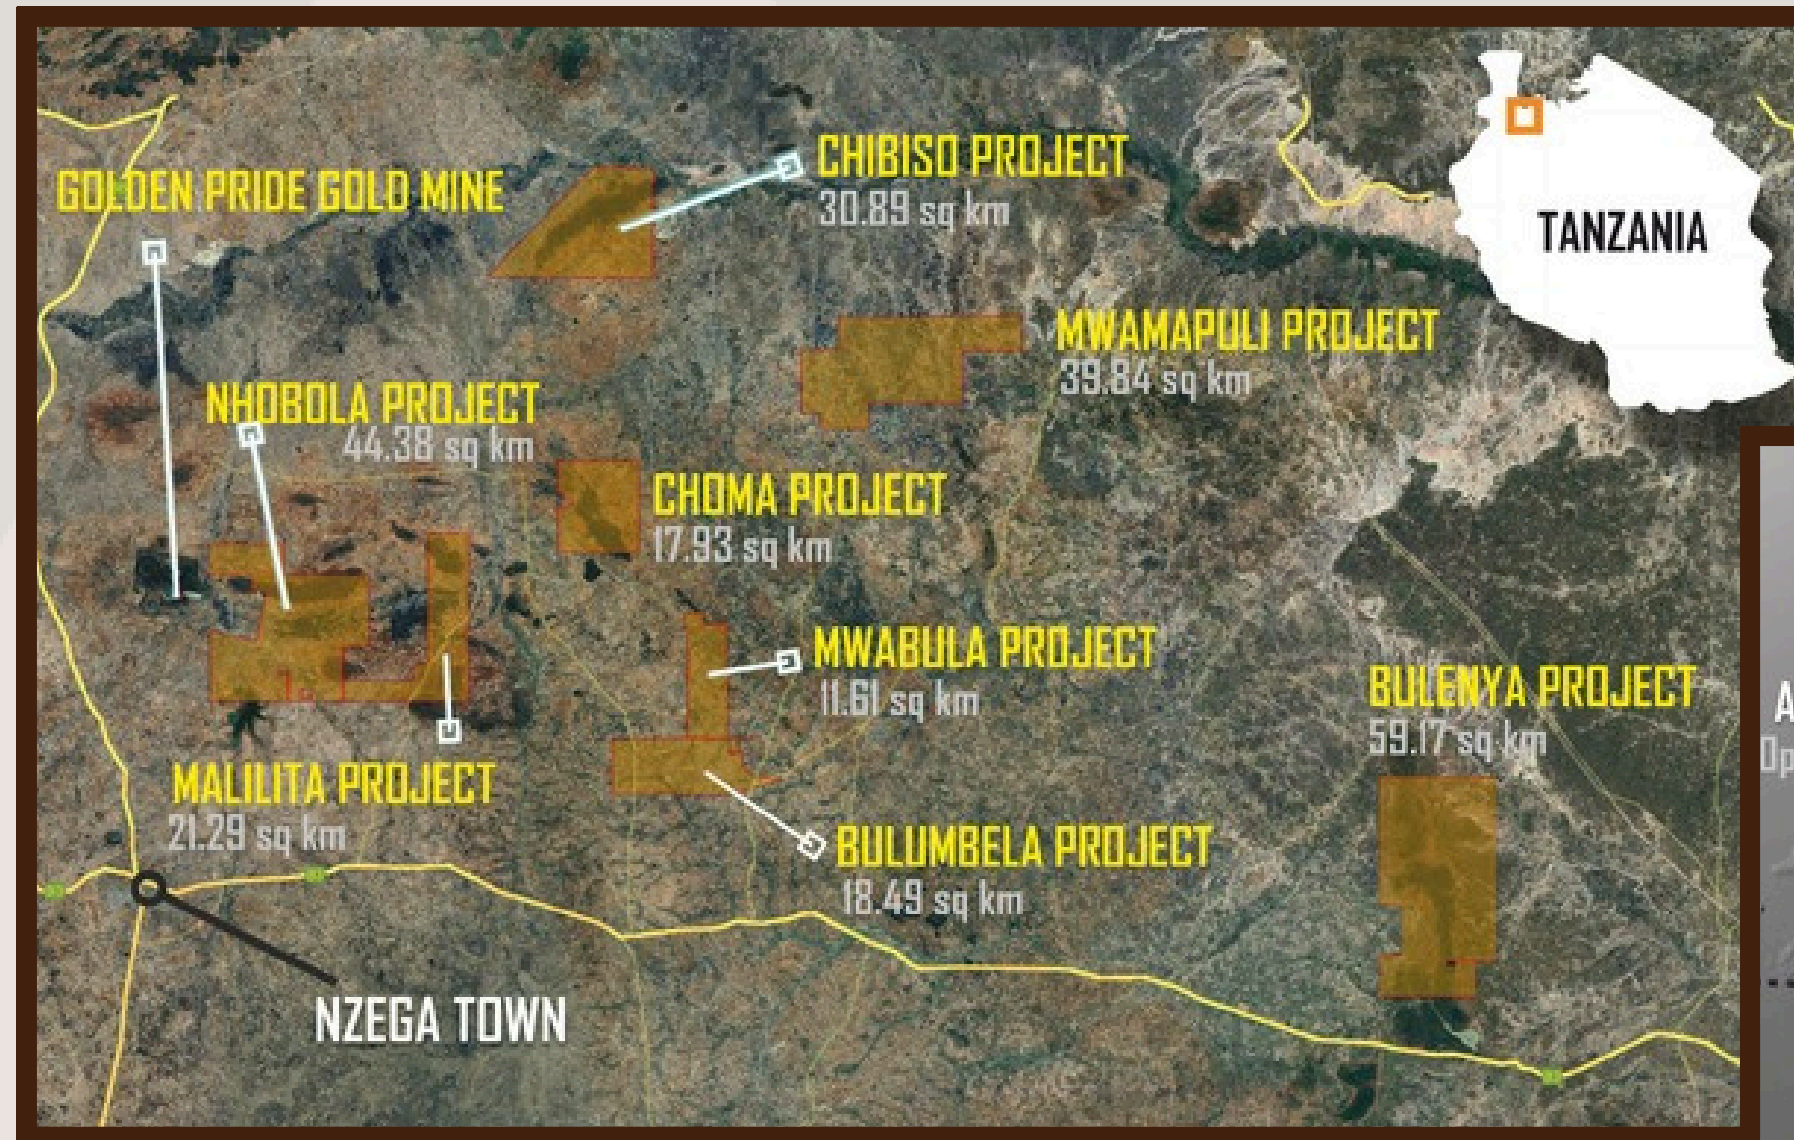

Our next major step is to test the identified targets through **Diamond and RC drilling program, expected to start from January 2026**

TIMELINE

Important Milestones for an Exploration Project to convert into Mining Project

- Preliminary Assessments
- Drilling
- Mineral Resource Estimate (MRE)
- Scoping Studies (SS) - **3 Months after MRE**
- Pre-Feasibility Studies (PFS) - **9 Months after SS**
- Mining Lease (ML) approved from Government - **3 Months after PFS**
- Development of Processing Plant and Mine
- Mining and Milling Operations

Generally, we start approaching investors from the date MRE is released and the funding rounds continue at further stages of SS, PFS, ML approval and Development. At each stage the uncertainty is decreased, and the valuation keeps increasing.

Project Name	Commodity	Expected MRE Release Date
Tanga Project	Graphite	December, 2025
Jomu Project	Gold	September, 2026
Isonda, Siga Hills Projects	Gold	June, 2027
Nzega Project	Gold	December, 2027
Geita Project	Gold	June, 2028

Thank You!
